10 October 2017

To Whom It May Concern:

This letter is to confirm that the uProcess series of microfluidic devices are sole source products that are manufactured exclusively by LabSmith. The uProcess product line, which includes syringe pumps, microfluidic valves, pressure and temperature sensors, and connectors, are known for their small package size and nanoliter dead volumes. The products can be monitored, controlled, and automated with the LabSmith’s uProcess software.

Mengel Engineering, located in Virum, Denmark, is an authorized sales representative of all LabSmith products.

Please contact me if you require additional information.

Sincerely,

Kirsten Pace

President, LabSmith
